

## How to prepare your disinfectant for use in basket balls.

### Required items:

- 6 gallon bucket - 5 gallon will not fit a basket ball.
- 5 teaspoons of Bleach
- 1/2 cup of Dawn dish soap (or any dishwash degreaser)
- 1 gallon of water
- Rubber gloves

Pour both the bleach and dish soap into water and stir. After foam forms from stirring, pour the solution into the 6 gallon bucket. Do not worry about fully filling the bucket. You need room for the ball.

**NOTE: Solution is only good for 24 hours. Discard solution daily.**

Drop one ball at a time into the 6 gallon bucket with the solution you made. Use the brush to scrub the ball and release any grim and dirt that has accumulated onto it. If you are only disinfecting the ball, leave the ball in the solution for at least 30 seconds, rotating it to allow the entire surface to be exposed to your solution.

Then remove the ball and place on a towel to air dry.

**\* Wear eye protection when handling any bleach products.**
