

Go Ball-istic Restore Instructions

Your game should contain 2 Restore DVD disks. One disk will have a ICE logo in blue and the other will have the Go Ball-istic logo on it. The ICE logo disk contains the operating system and has no game files. The other disk contains only the game software. If you only wish to change the variation of the game use the game software disk. If your computer no longer will boot or if you had just recently changed your hard drive, then you will need to install the operating system and use the ICE blue logo disk.

Operating System restore:

Insert the Operating System restore disk into the DVD drive and reboot the computer. You will need to have a mouse and keyboard attached at this time. The DVD will boot and begin to install the Operating System. When it has finished copying the files, it will tell you to remove the DVD and restart your computer.

Remove the disk and restart the computer. **Do not insert the second DVD at this time.** The computer will boot up and sit at the desktop. Do nothing until you see a request window telling you it needs to reboot for the changes to take effect. Restart the computer by left clicking on the "YES" to allow it to restart. After Windows has loaded you will notice the screen is too high of a resolution. Follow these steps to correct the resolution:

- 1) Right click with the mouse on the desktop (Do not click on any icons).
- 2) Left click on "Nvidia Control Panel".
- 3) Left click on "Change Resolution".
- 4) Left click on "Customize"
- 5) Left click on "Create custom resolution"
- 6) Left click on "Accept"
- 7) Change the value in Horizontal Pixels from 1920 to 1280.
- 8) Change the value in Vertical Lines from 1080 to 768.
- 9) Left click on "Test"
- 10) Left click on "Yes"
- 11) Left click on "Ok"
- 12) Left click on "1280x768"
- 13) Left click on "Apply"
- 14) Left click on "Yes"
- 15) Left click on "File"
- 16) Left click on "Exit"

Now insert the 2nd DVD – Game Software disk.

The DVD should load a menu which you would then select with the left mouse button the variation of the software you wish to install. When it has finished, left click on "Eject DVD" and remove the DVD from the drive. Press the power button on the PC to turn the PC off. Your game is now factory restored.
