

FOOTBALL GAME CAGE REINFORCING BRACKET INSTALLATION

Install the two bracket halves as shown on the area of the cage where it is needed.

First tighten the joint connectors

Secondly use the self drilling screws to fully secure the brackets

If the brackets are required on the top of the cage then the inside self drilling screws will not be required. Instead the inside bracket will fit in between the cage side and cage roof. Loosen the cage roof screws to allow the bracket to slip in between the two and then re-tighten the screws
