

## SUPER CHEXX PLAYER SHAFT SERVICE DOCUMENT

Player shafts may be prone to bend during cabinet transport. This document instructs operators how to physically bend the players while they remain in the game.

Shaft bend point

Physically bend the player while the shaft remains fixed in the gear box. Bend or lean weight on the player to force the stick down if the puck is going under the stick. If the stick is scraping on the ice surface pull the player towards his back foot to lift the stick.
